

# STRIKE BALANCE between FLEXIBILITY AND AUTOMATION

Container Handling Solutions  
Featuring Flexible Automation  
that Changes as You Do

**INVEST IN EQUIPMENT THAT  
CAN ACCOMODATE FUTURE  
CONTAINER CHANGES**

Morrison equipment is designed to include timing screws and change parts that can be replaced to run multiple or new container sizes on the same equipment.

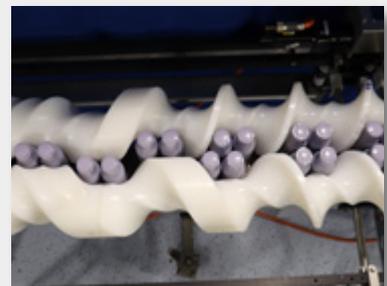

## **1** Lane Combiners and Dividers

Lane combiners and dividers are great additions when you need to add another system upstream or downstream to increase throughput.

## **2** Vertical and Horizontal Denesting Machines

Front of line denesting is labor intensive and slow. Automating this process reduces risk to your workforce while increasing throughput.

## **3** Multi-Packing + Variety Packing Equipment

Customized to your pack patterns, we utilize timing screw design to position containers or custom enhancements to completely automate these processes.
